Changing ShopFactory user interface to a different language

Merliza N. - 2022-05-17 - Website und Produkte

ShopFactory detects the language in your **Control Panel - Regional Format** setting. The language for ShopFactory user interface does not use the *"Location"* setting. It detects the language in the Regional Format (Date and Time Formats).

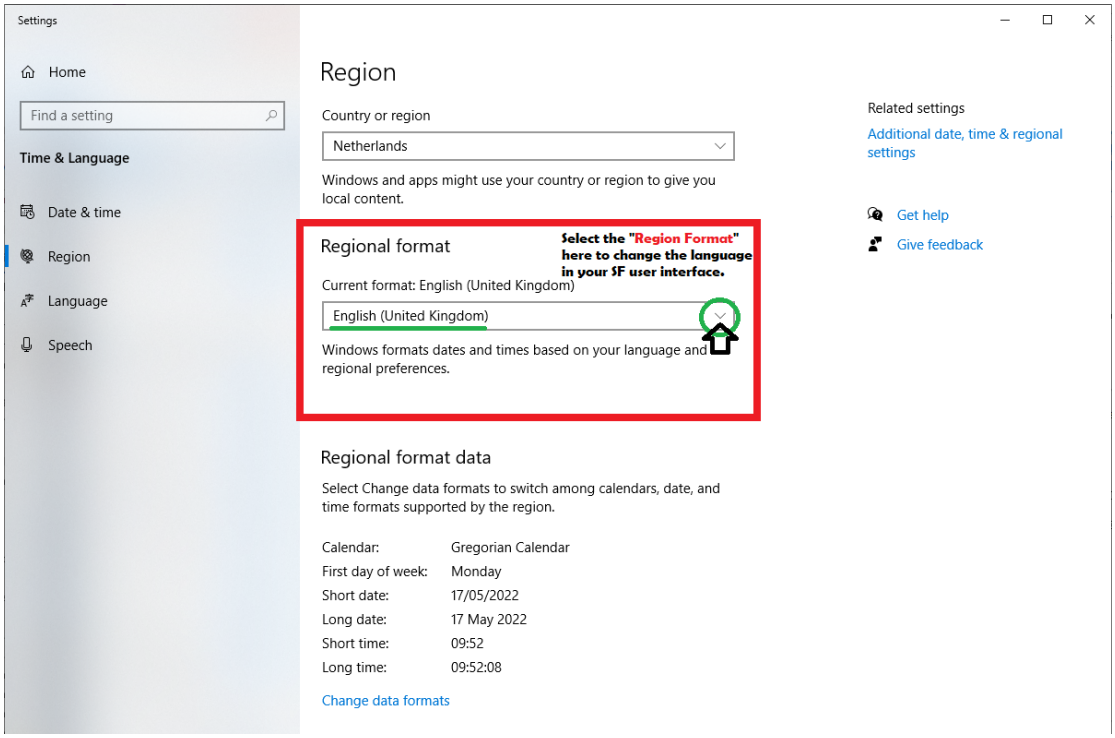

Changing your ShopFactory user interface language:

- In the Windows Search box (beside the Start button), type **region settings**

- From the 'Best match' search results, select "**Region Settings (System Settings)**"

- Select the dropdown button in the Region Format

- Select the language you want from the dropdown

- Click ***Close*** to apply the changes.

- Close ShopFactory and then open it up again – you will now see the interface in the 'region format' language you selected.
