

Changing ShopFactory user interface to a different language

Merliza N. - 2022-05-17 - Website und Produkte

ShopFactory detects the language in your **Control Panel - Regional Format** setting. The language for ShopFactory user interface does not use the "*Location*" setting. It detects the language in the Regional Format (Date and Time Formats).

Changing your ShopFactory user interface language:

- In the Windows Search box (beside the Start button), type **region settings**
- From the 'Best match' search results, select "**Region Settings (System Settings)**"
- Select the dropdown button in the **Region Format**
- Select the language you want from the dropdown

- Click **Close** to apply the changes.
- Close ShopFactory and then open it up again – you will now see the interface in the 'region format' language you selected.
