

Adding Paragraphs/Products as Linked Images

Jobelle C. - 2021-11-16 - Pages and Products

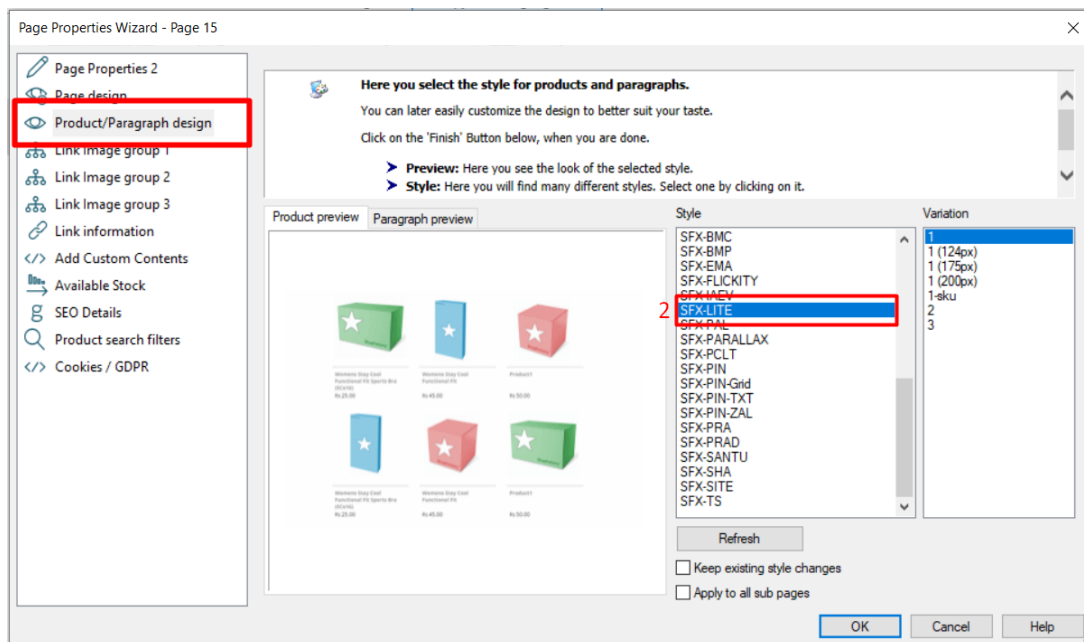

In ShopFactory, you can have image links using Paragraph/Product with column-display productloop style. This is commonly used to feature pages and products or add quick links to a category or a product.

For example, on your homepage, you can feature products or categories that are linked to a specific page in the shop or to an external website.

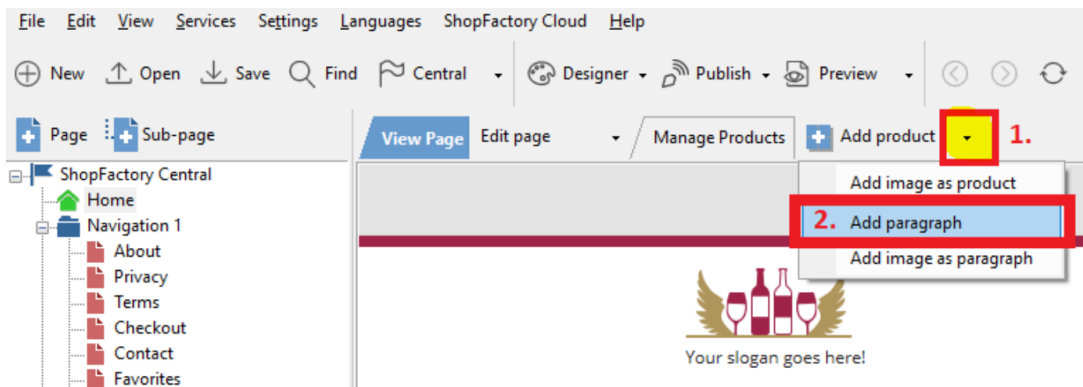

This can be done by adding paragraphs with linked image using a column-display product style such as **SFX-PAL, SFX-LITE, SFX-PIN**

- Open your shop in ShopFactory

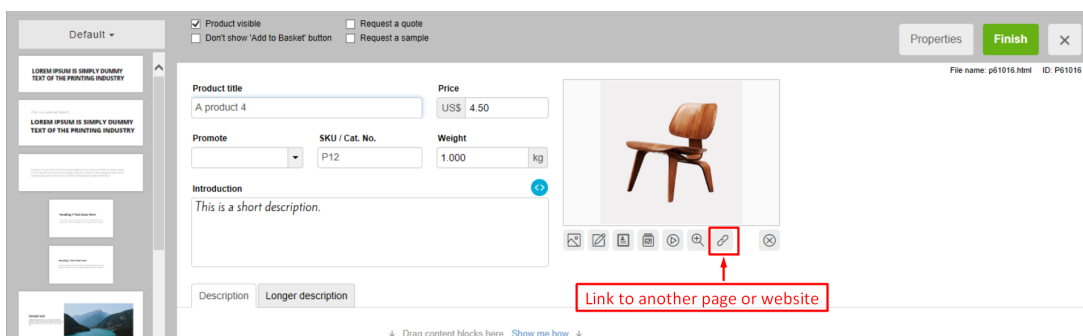

- At the left tree menu, select the page you want to add paragraph links -> right-click and select a **"Product/Paragraph style"** -> choose any grid display such as *SFX-LITE* variation 1 -> click OK.

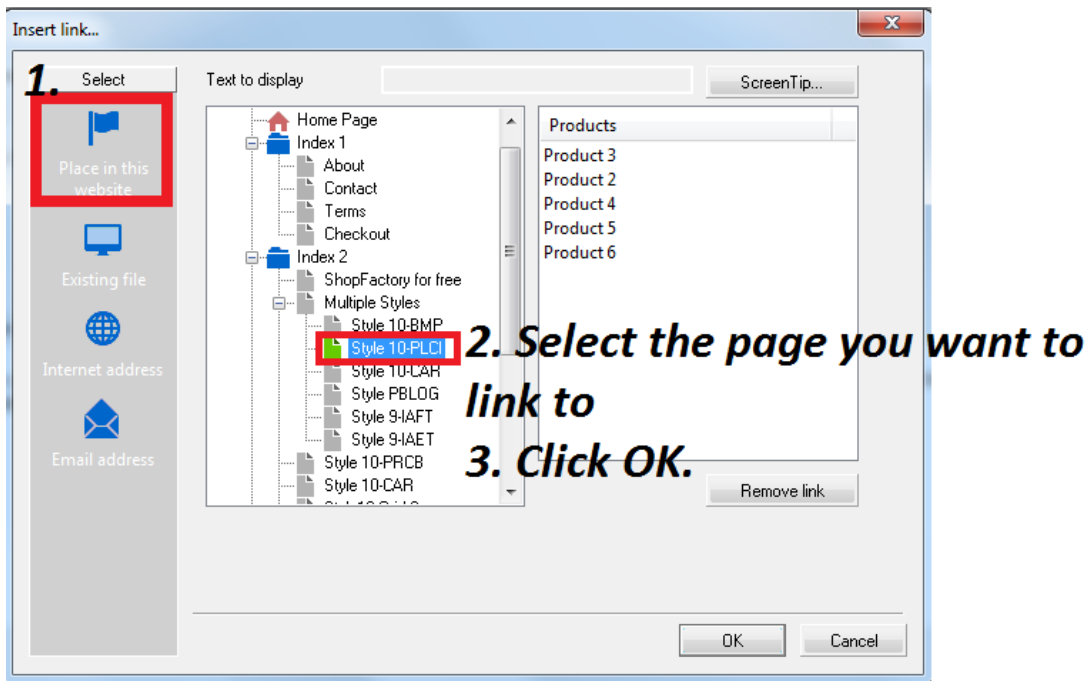

- Now, click on Add Product dropdown arrow, select -> **"Add Paragraph"**

- Select the image you want to use for your paragraph
- In the product properties, locate the image editing toolbar and click on the “**Link to another page or website**” button

- Select whether you are linking within the shop (**Place in this website**) or externally (*Internet address*)
- If you want to link to a page in this shop, select the page on the left-tree menu and then click OK.

*Repeat above steps for all other paragraph links.

- Save and preview your shop in external browser

The output should look something like this, where the paragraph images are actually linked to other pages in the shop:

Each image here is actually linked to a page in the shop
