Changing text color being white on white background or black on black background

Elenor A. - 2021-12-08 - Design and Customizations

A. Checkout page – the checkout form text labels are white texts on white background.

It's GC22 element. Make the text color of the **Content** div black.

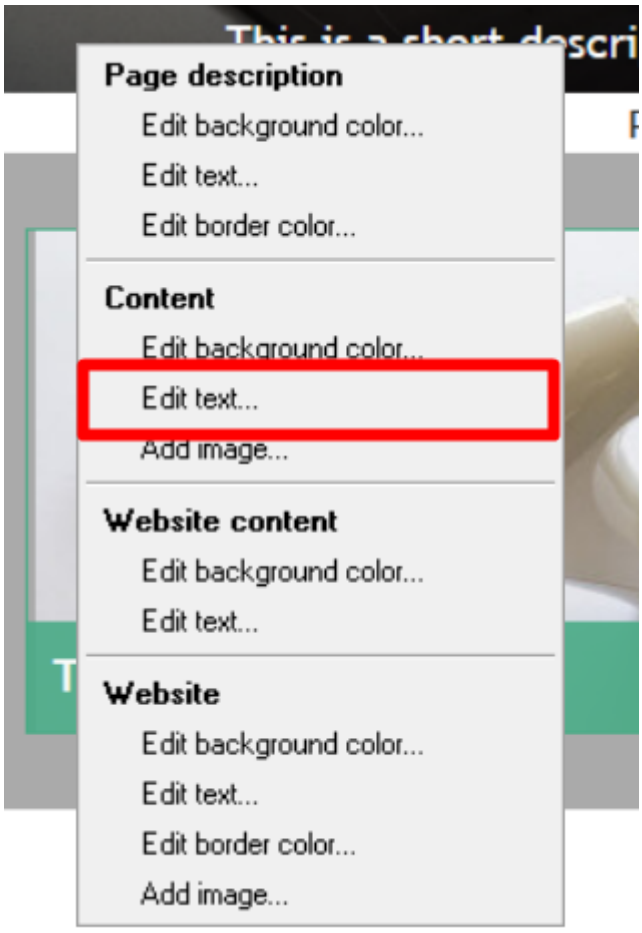

The white text on white background may be caused by setting the CONTENT "Text" colour to white: It's GC22. Make the text color of the Content div black. To fix the problem please follow procedure below:

- Open shop in ShopFactory

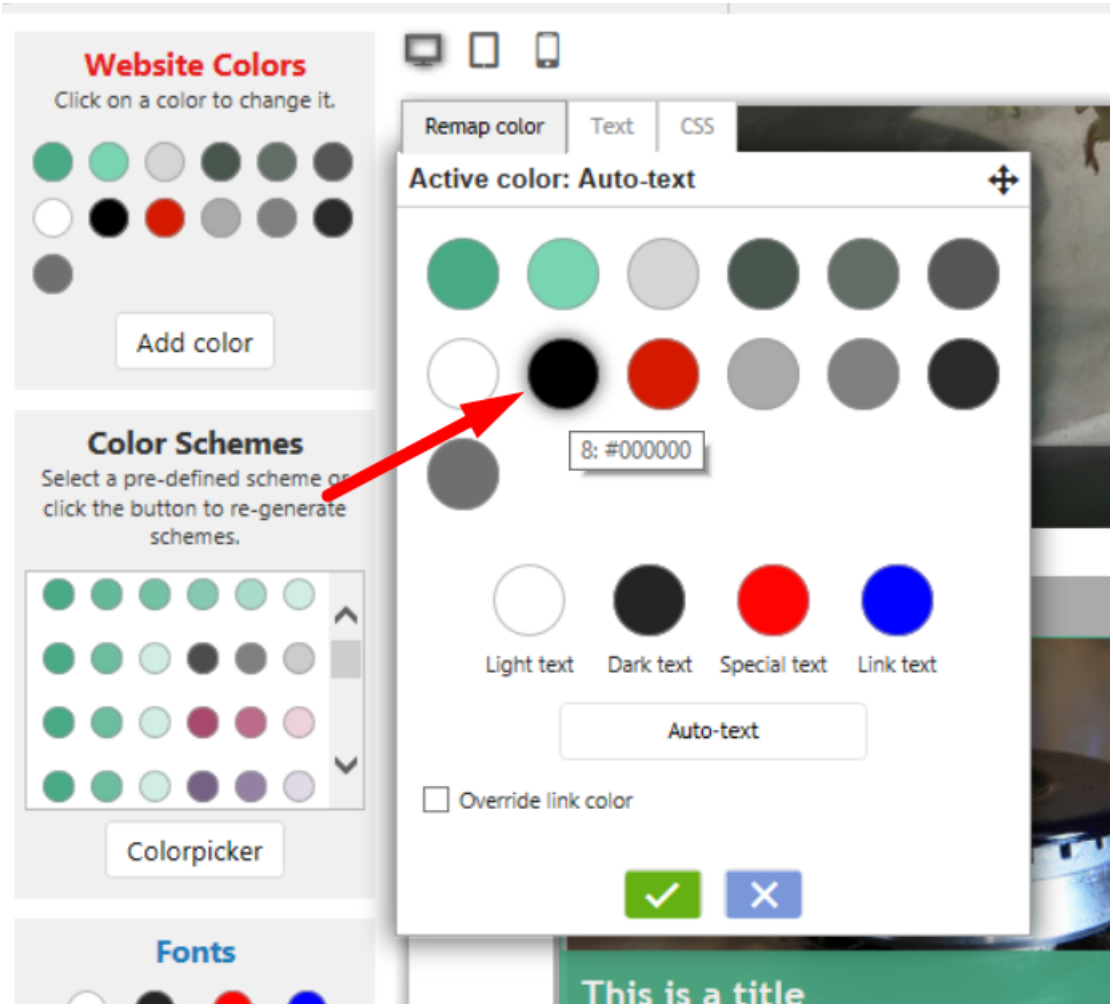

- Click Customize Design

- Right click on any area

- Click "Edit text..." under **Contents**

- Change the color to black (#000000)

- Click Ok

- Save and preview shop

- Publish shop again so that the changes are uploaded online

B. Basket page – link to terms and conditions is set to white text on white background

GC1 element was set to be white on white. GC1 is usually **WebSiteContent.**

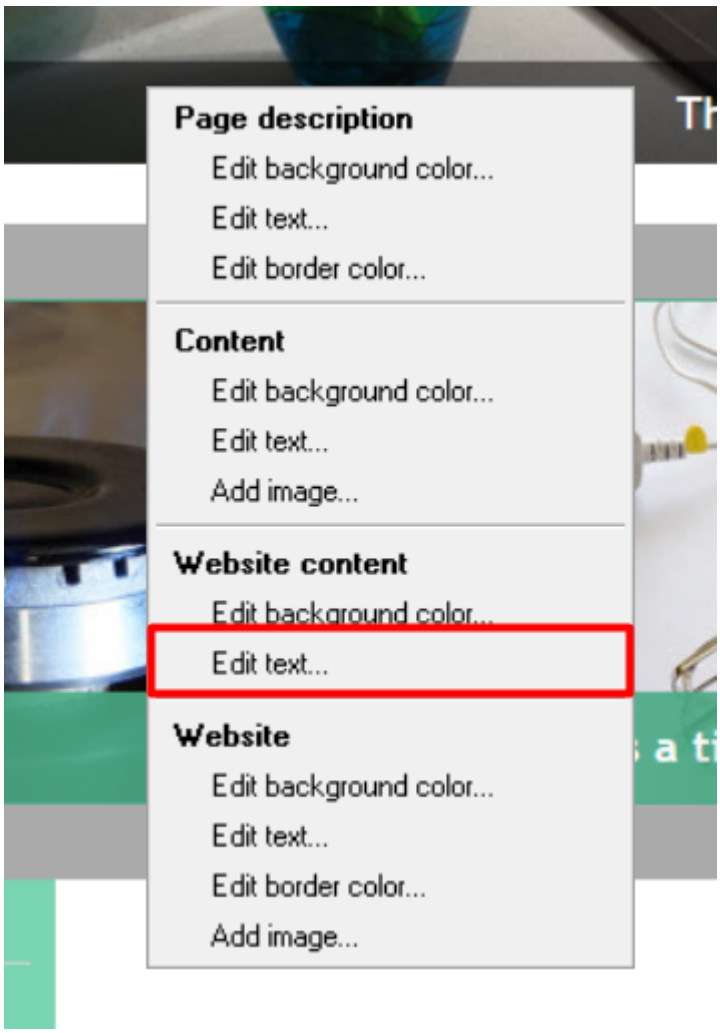

(**Note:** GC classes can vary between website themes and styles.)

i.e. SFX-HOM-AA theme

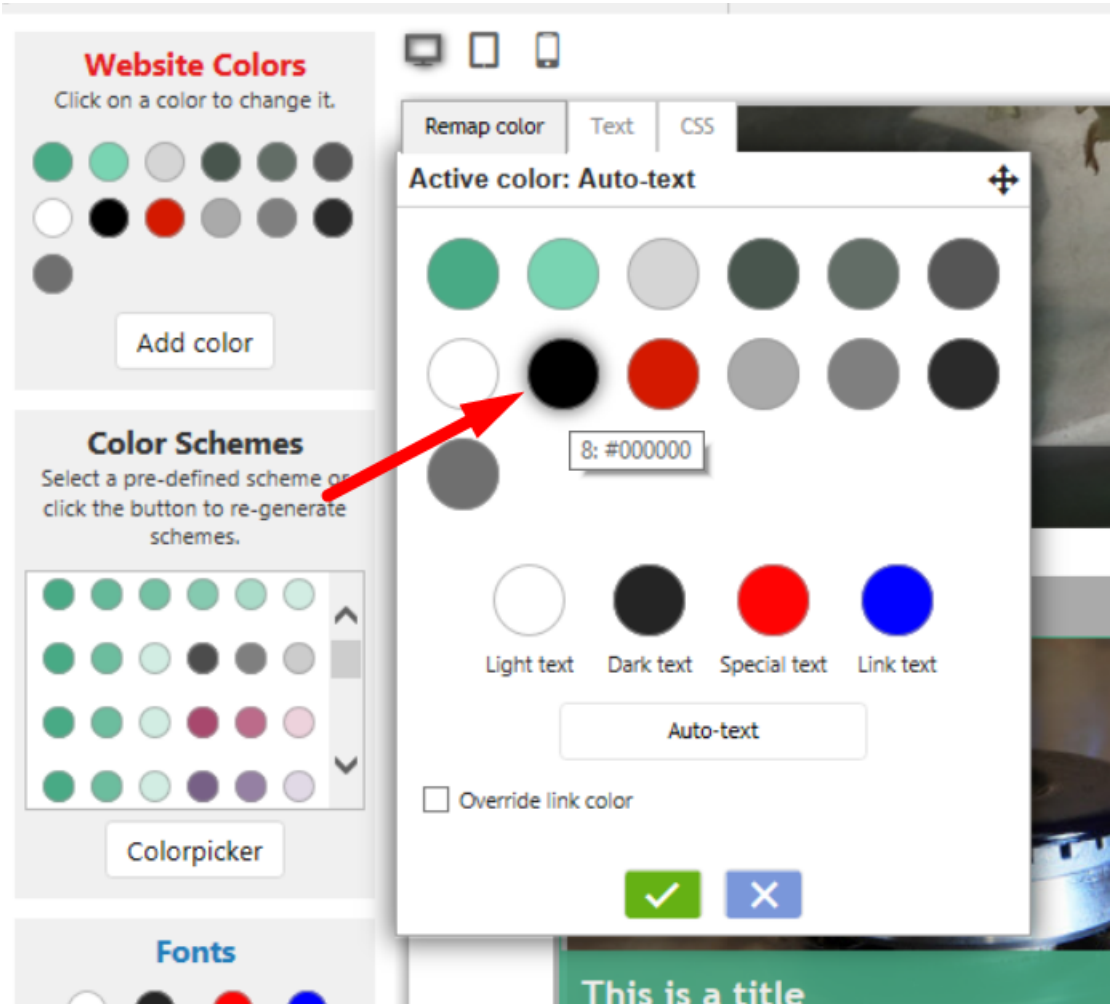

- Click Customize Design

- Right click on any area

- Click "Edit text..." under Website content

- Change the color to black (#000000)

- Click Ok

- Save and preview shop

- Publish shop again so that the changes are uploaded online

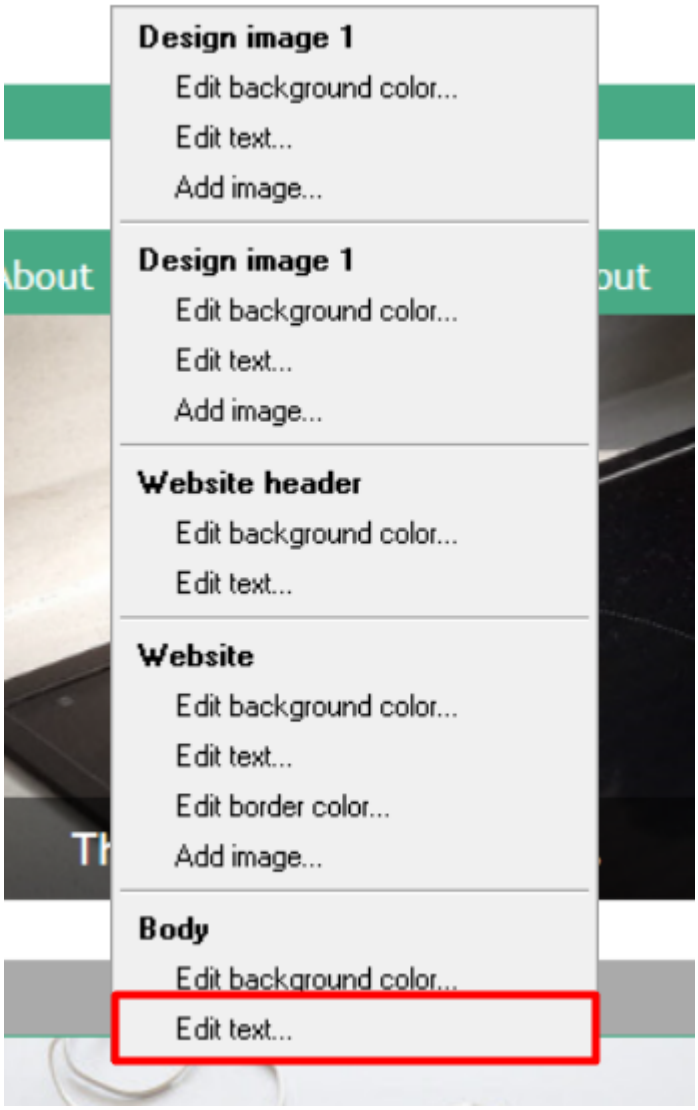

C. Checkout Billing and Shipping forms: Provinces/States dropdown is white on white

Change GC41 text color from white (#ffffff) to black (#000000)

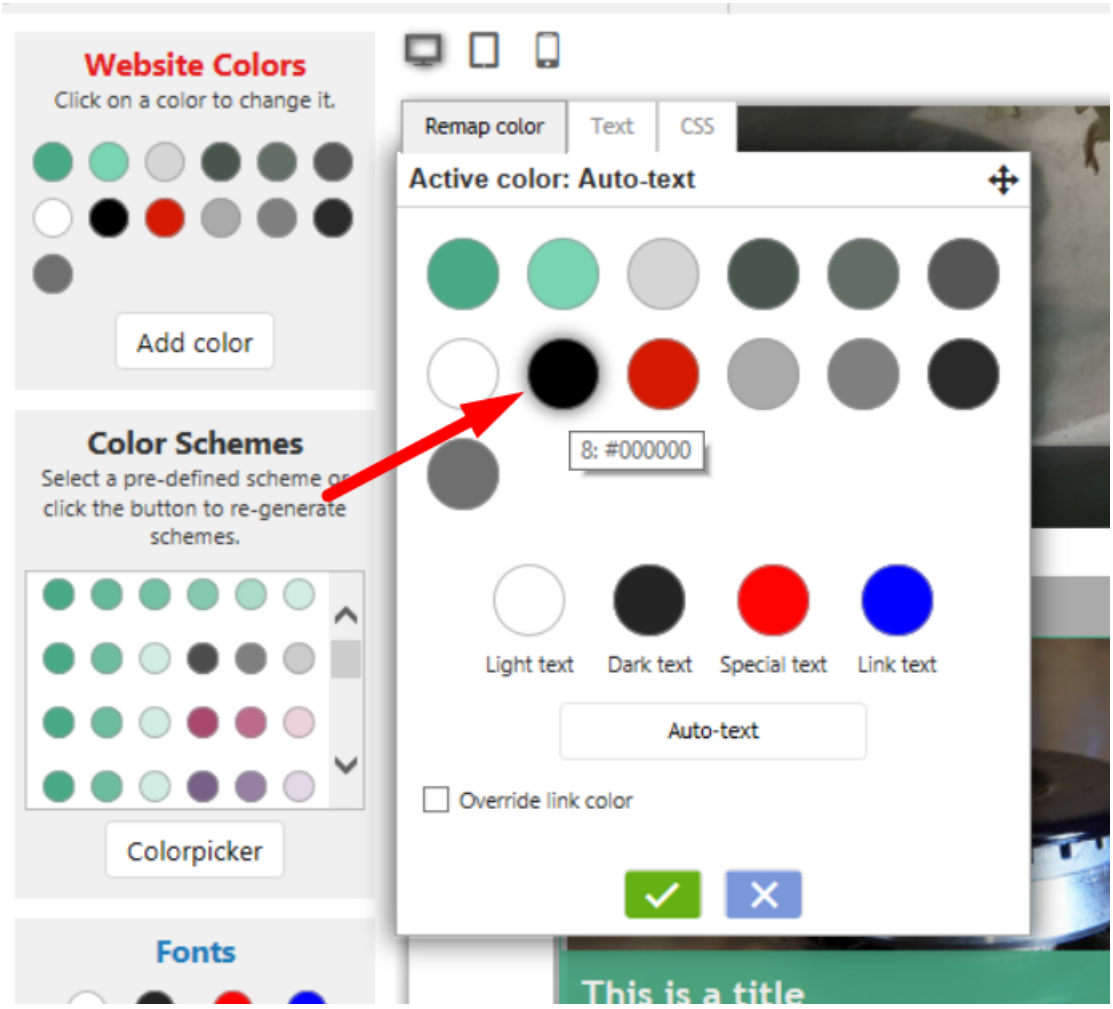

GC41 is used on the **Body** tag. Set the text color to black.

- Click Customize Design

- Left click on the header section -> at the shortcut menu, select BODY tag -> Edit Text...

- Change the text color to black

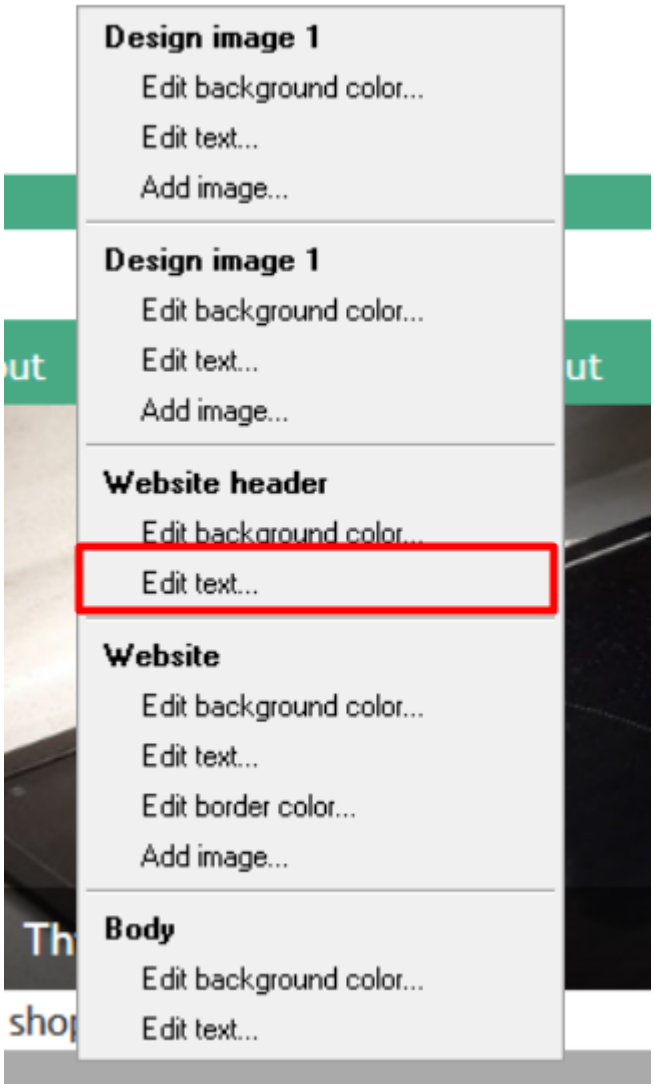

D. Mobile Search bar – search words are white on white

It's GC39. **WebSiteHeader** uses it. Set the text color to black.

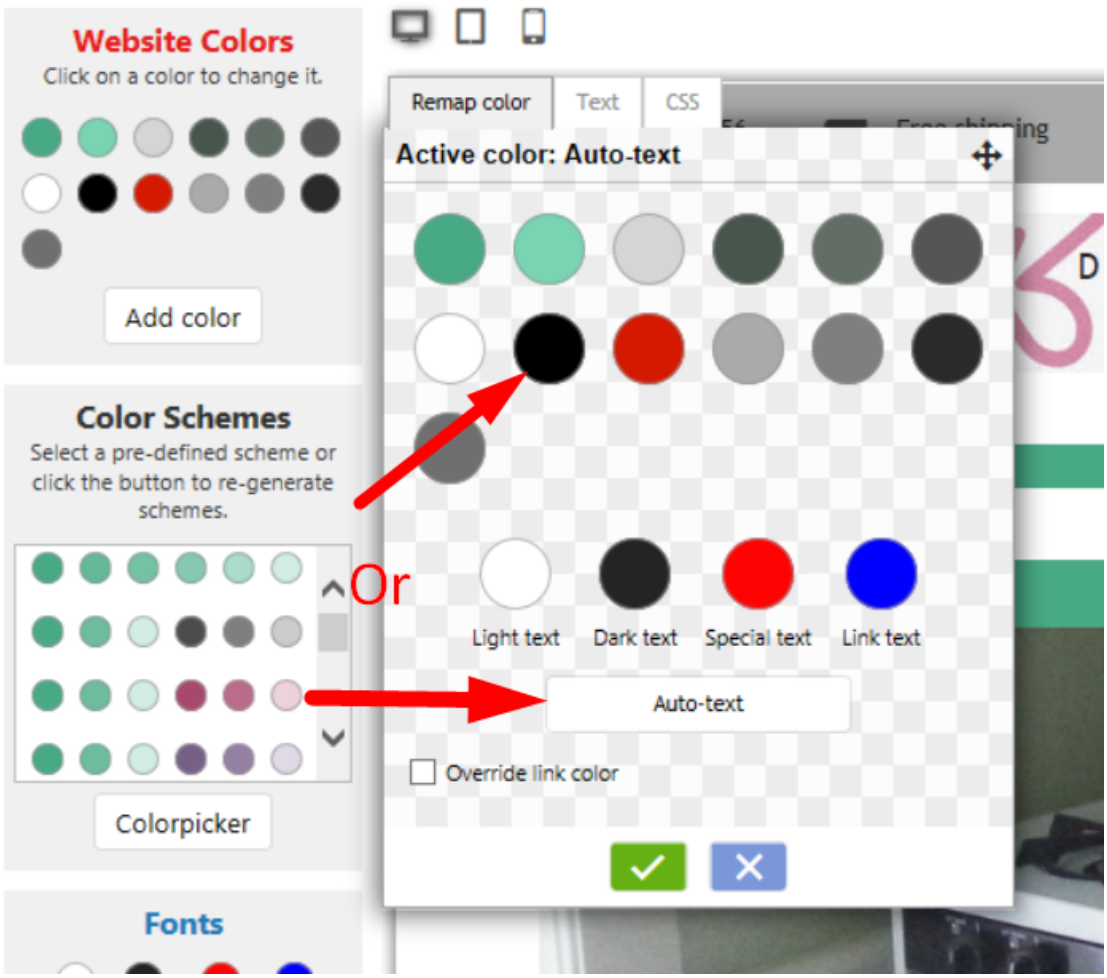

Or better yet make WebSiteHeader text color **auto**.

- Click Customize Design

- Left click on the header section -> at the shortcut menu, select Website header -> Edit Text...

- Change the text color to black

In Customise Design, change GC39 (**WebSiteHeader**) text color to **autocolor.**

- Open shop in SF

- Designer menu -> Customize Design

- Left click on the Site Header section and change the Site Header TEXT colour to autotext.

If the above doesn't work, add custom website html image

- Open your shop in ShopFactory

- Click **Central** dropdown button -> **Custom Website contents**

- Click the + (Add) button to add a NEW custom html

- Drag the text block content into the description section

- On the top right of your new text block (HC1 or HC2 - depending on how many custom html you already have) click the EDIT (Pencil) icon

- Edit the custom html

Change the HTML Identification name: **Mobile Search text**

- Copy/paste the code in the content window:

<style>

#mobile_search #phrase {color:#000000;}

</style>

- Click OK

- Click Finish

- Save and preview your shop in external browser

- Publish the shop again.

E. Mobile company logo bar make background color the same as Utils element

Add as website custom code, with Field contains javascript checkbox ticked.

- Open your shop in ShopFactory

- Click Central dropdown button -> Custom Website contents

- Click the + (Add) button to add a NEW custom html

- Drag the text block content into the description section

- On the top right of your new text block (HC1 or HC2 - depending on how many custom html you already have) click the EDIT (Pencil) icon

- Edit the custom html

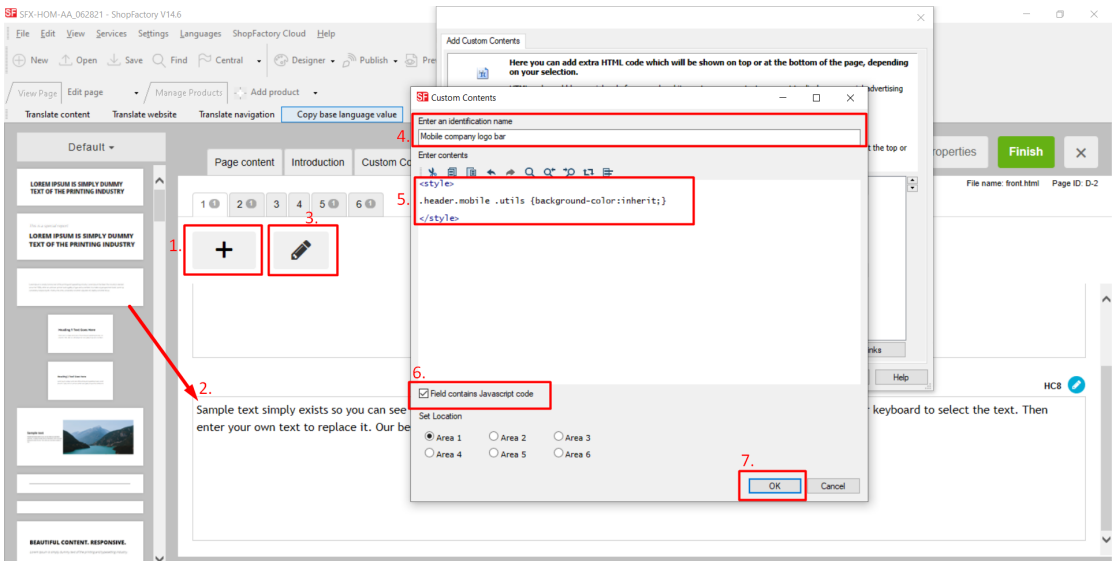

Change the HTML Identification name: **Mobile company logo bar**

- Copy/paste the code in the content window:

<style>

.header.mobile .utils {background-color:inherit;}

</style>

- Click OK

- Click Finish

- Save and preview your shop in external browser

- Publish the shop again.

F. Search results page is white on white – put background image

- Open your shop in ShopFactory

- Click Central dropdown button -> Custom Website contents

- Click the + button to add a new content

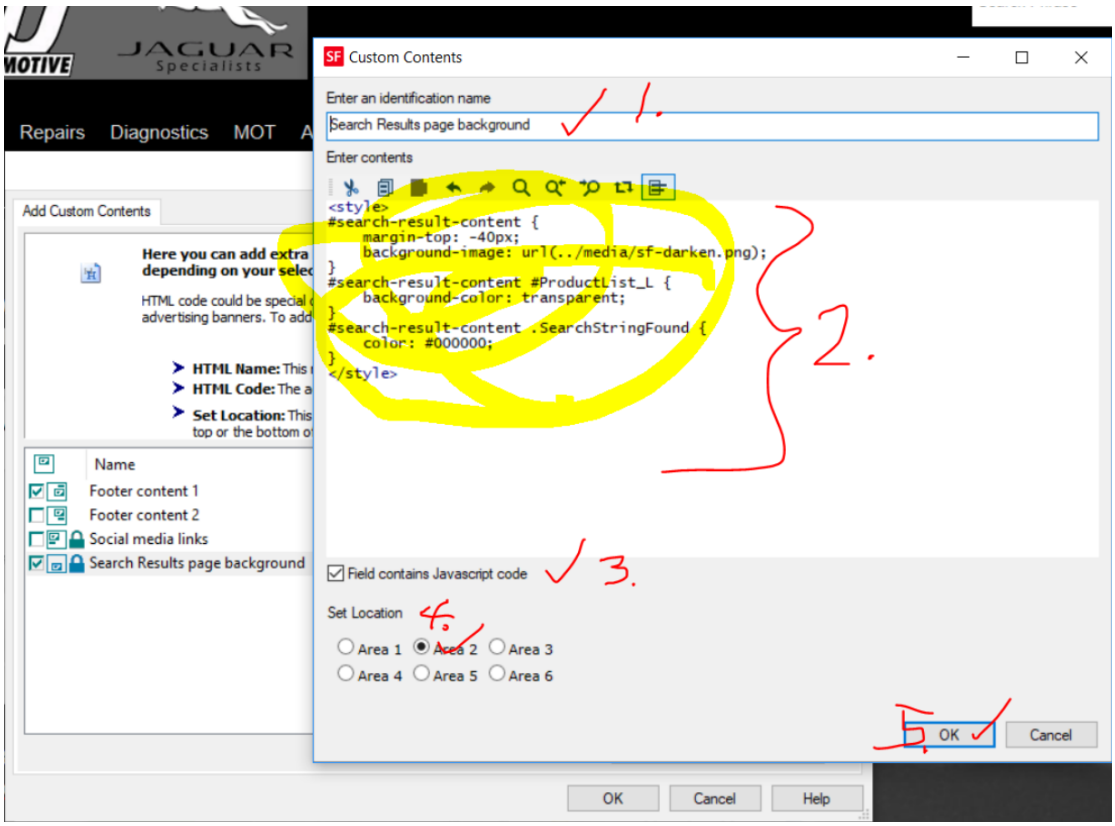

- In the newly added HC1 or HC2 – click on the EDIT (Pencil) icon to add the contents

- Double click on the HC1 or HC2 then paste the code in the content box

- Change Identification name: **Search results page texts**

- Copy/paste the code in the content window:

```
<style>
#search-result-content {
    margin-top: -40px;
    background-image: url(../media/sf-darken.png);
}
#search-result-content #ProductList_L {
    background-color: transparent;
}
#search-result-content .SearchStringFound {
    color: #000000;
}
</style>
```

- Click OK

- Click OK

- Save and preview your shop in external browser

- Publish the shop again.
