Export existing pages and products from one shop and import these products into another shop

Jobelle C. - 2021-09-07 - Pages and Products

CHECKPOINT: The shop language you are exporting products from MUST match the language of the shop you are importing into.

For example:

*If your source shop has **en-uk** language, then the shop you are importing the products into must have en-uk as well in the translation languages.*

*The shop you are importing to MUST at least use **en-uk** as primary shop language. Or the shop you are importing to must have the **en-uk** added in the Languages -> "Translation languages"*

*If **en-uk** is a secondary language then the products will be imported and be visible in the imported language.*

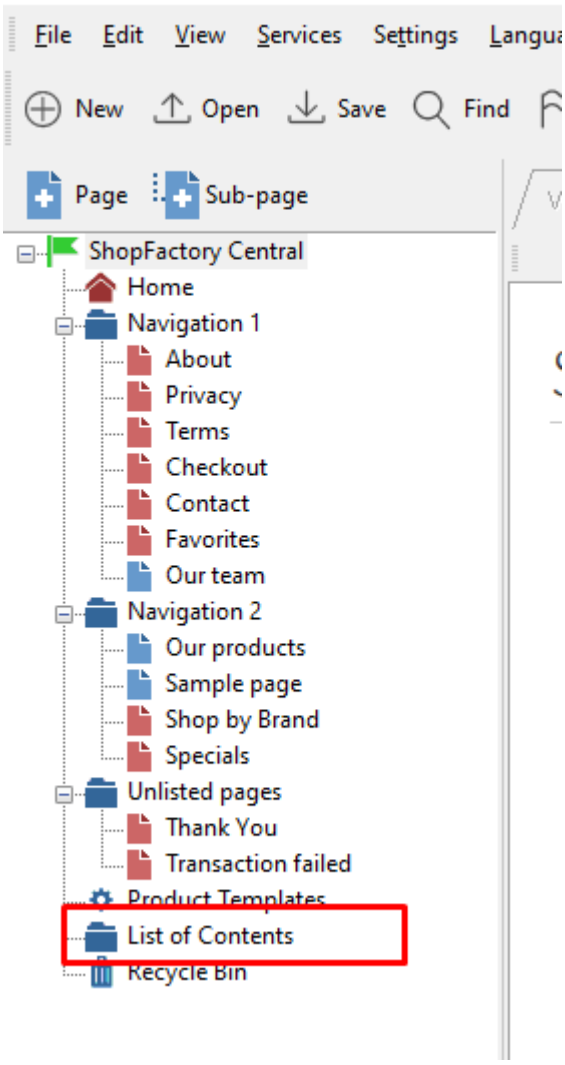

- *If the imported language is not the primary language, then products will be visible in the imported language but not visible in the primary language...*
- *If the imported language is the primary language, products will be visible in the primary language*

A. How to export products within ShopFactory:

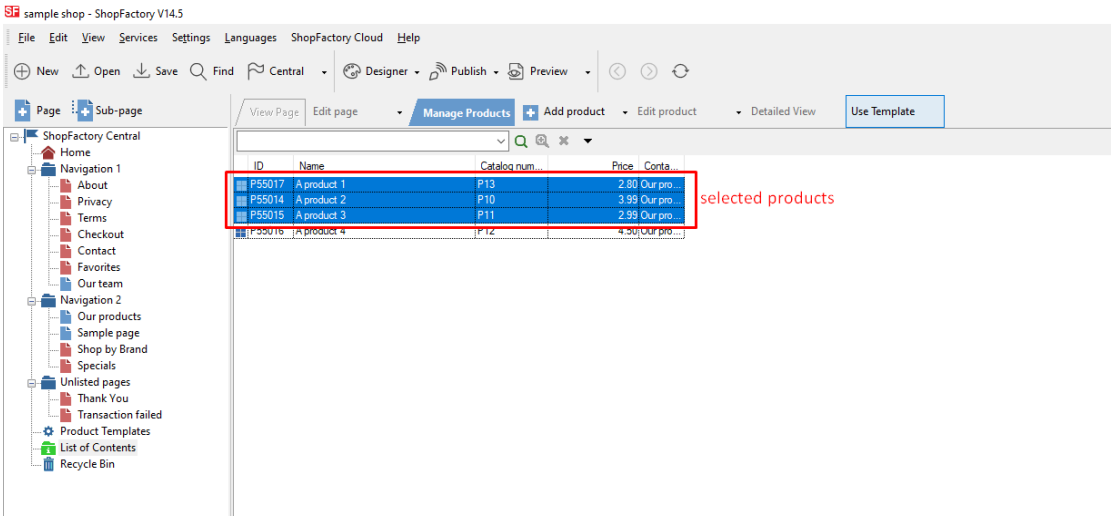

Please follow the steps below on how to export products as an xml file:

1. Open the shop where you want to export products

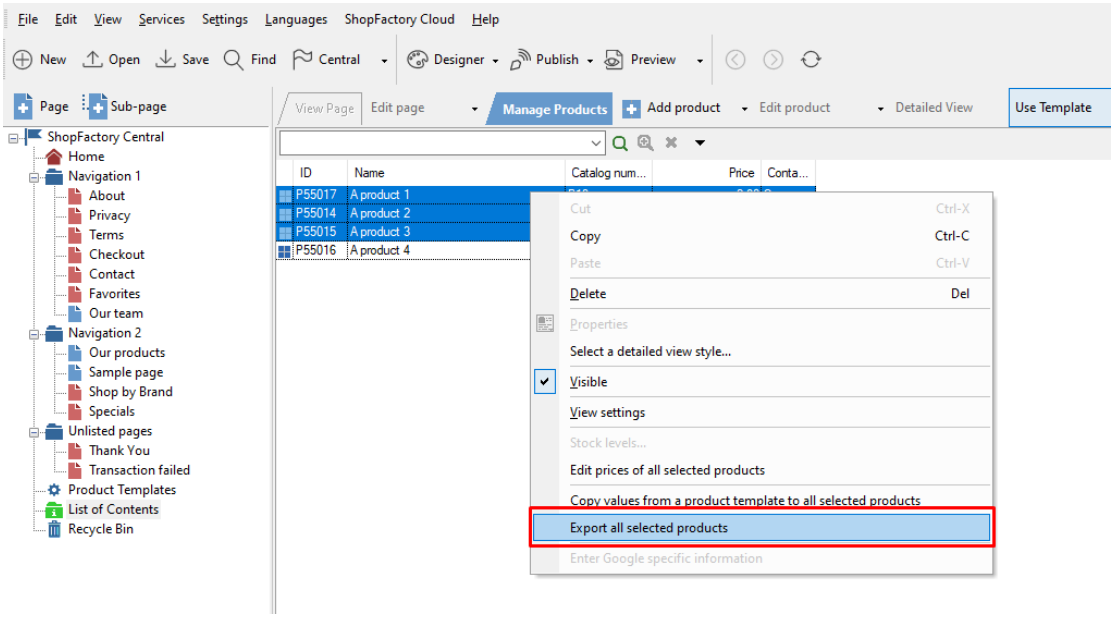

2. On the left tree, select **LIST OF CONTENTS**

3. Select Products you want to export

4. Right click on the seleted products -> click "**EXPORT ALL SELECTED PRODUCTS**"

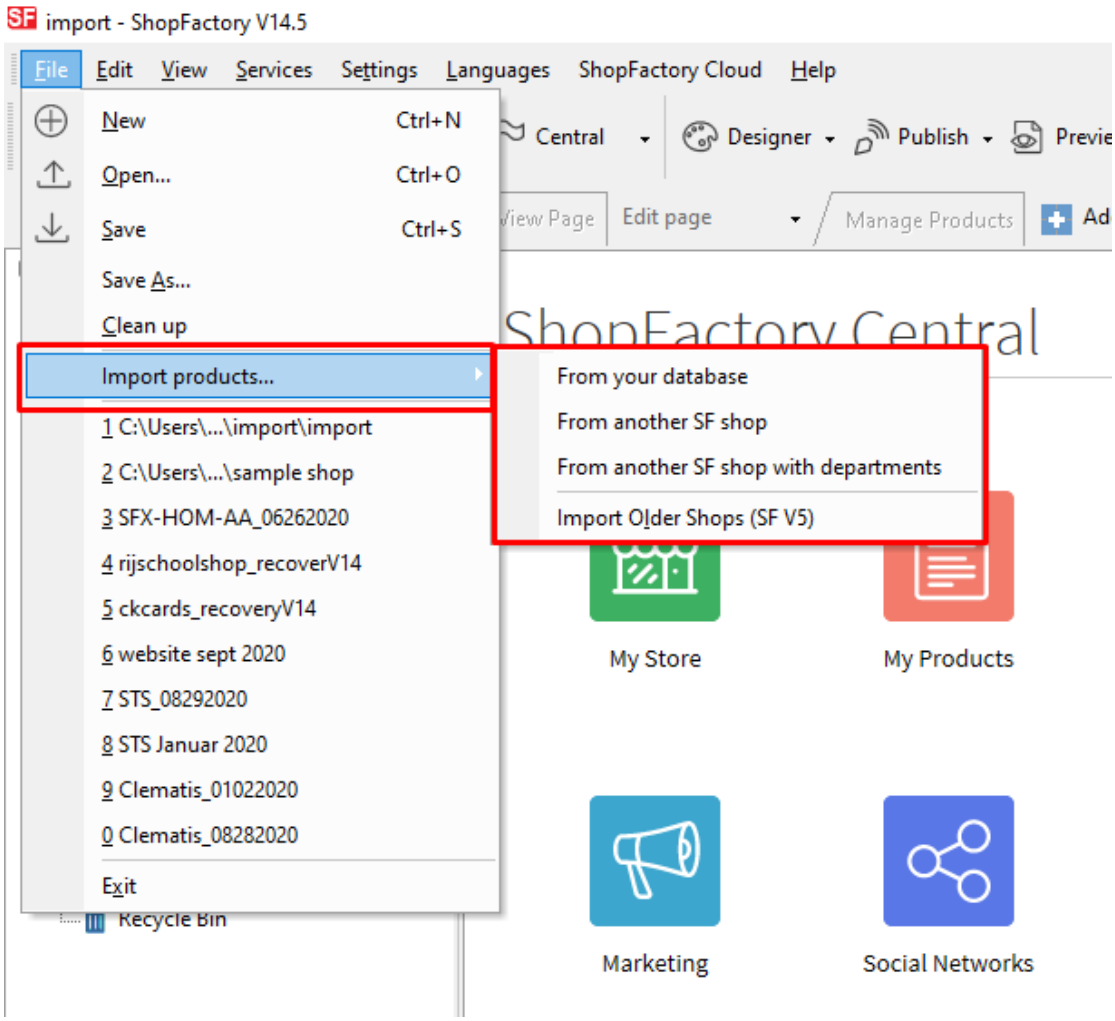

5. Save it as an XML file

B. How to import products within ShopFactory:

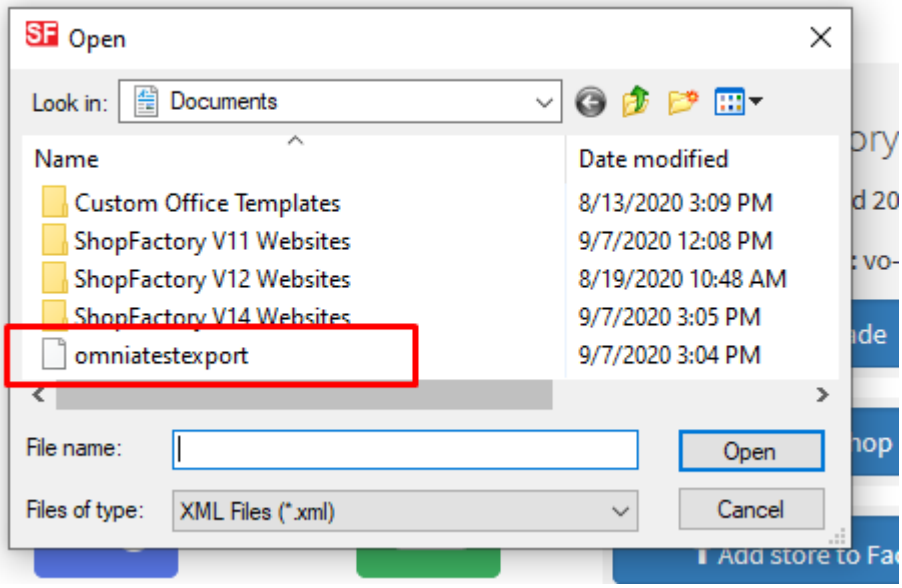

1. Run ShopFactory application

2. Select the shop you want to import the products into

3. Click FILE menu -> select **IMPORT PRODUCTS...** (or if you want the department names as well, select "**Import another SF shop with departments...**")

4. ***Import products From another SF shop***, select the export XML file

5. Click -> OPEN

The products in XML file will now be imported in your shop.
