Applying the fix for Google Search Console: New Breadcrumbs issue detected for site (data-vocabulary.org schema deprecated)

Merliza N. - 2021-12-08 - Optimización para motores de busqueda

Make sure you have updated to the latest ShopFactory 14 release.

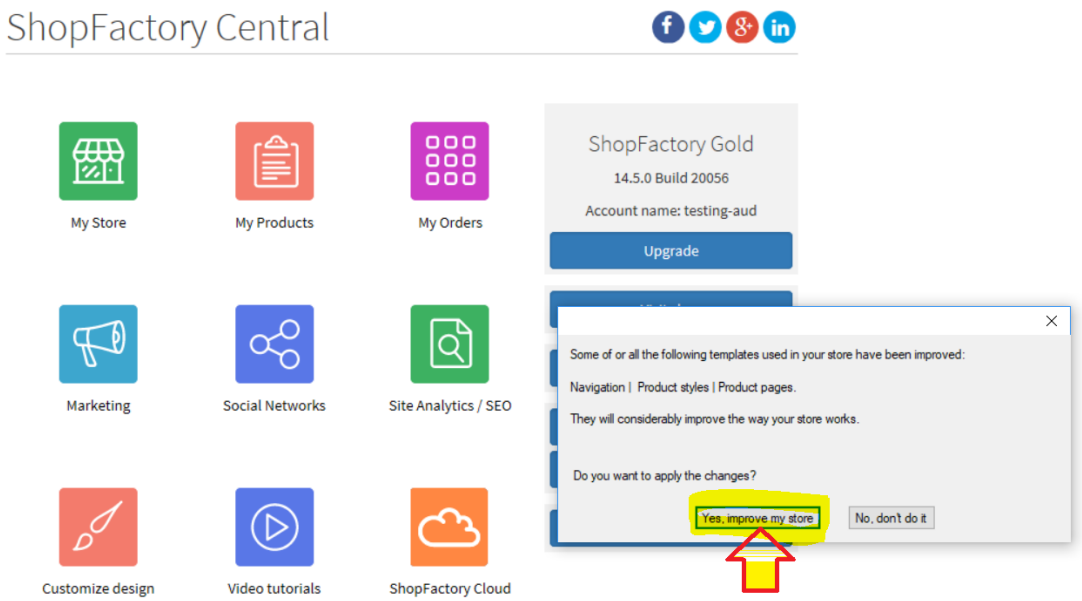
1. Download and install the latest ShopFactory 14

Download from https://www.shopfactory.com/contents/en-us/d18.html

2. Ref. SF-2655: SEO Google Search Console: Fix Breadcrumbs issue detected for website (data-vocabulary.org schema deprecated)

To apply the fix:

When ShopFactory shows a prompt to apply style changes, select "*Yes, improve my store.*" or manually reselect your website theme to apply the SEO structured data.



Click '***Designer***' menu -> ***Select Website Theme*** -> untick "*Include Sample Data*" -> locate your current template and click '***Select***' button.

Your mapping and color customizations will be automatically applied after the website theme is reselected.

Important notes:

- If you have saved the default website theme as a new template, i.e. *SFX-GIF-AA_bey-col* and saved this template with a new name, then the fix will not be applie. You will have to select the default SFX-GIF-AA_bey-col (in this example) and then apply your color customizations again. We don't recommend saving SFX website themes as a new template anymore as styles and template fixes are only going to be applied to the default ones.
- If you have a paid custom template, then you will need to send your shop project to us so the fix can be manually applied in your custom website theme. Contact ShopFactory Support via https://support.shopfactory.com/
