# Export existing pages and products from one shop and import these products into another shop

Jobelle C. - 2021-09-07 - Páginas y productos

**CHECKPOINT:** The shop language you are exporting products from MUST match the language of the shop you are importing into.

## For example:

If your source shop has **en-uk** language, then the shop you are importing the products into must have en-uk as well in the translation languages.

The shop you are importing to MUST at least use **en-uk** as primary shop language. Or the shop you are importing to must have the **en-uk** added in the Languages -> "Translation languages"

If **en-uk** is a secondary language then the products will be imported and be visible in the imported language.

- If the imported language is not the primary language, then products will be visible in the imported language but not visible in the primary language...
- If the imported language is the primary language, products will be visible in the primary language

#### A. How to export products within ShopFactory:

Please follow the steps below on how to export products as an xml file:

- 1. Open the shop where you want to export products
- 2. On the left tree, select **LIST OF CONTENTS**
