What are Website maps?

Merliza N. - 2021-12-08 - Optimización para motores de busqueda

ShopFactory **automatically creates a special website** map page for search engines, to make it easy for them to index you complete website. When arriving at your website search engines fine a simple link to your website map – with all pages listed on it on the same level. This allows search engines to **even find pages which you have not directly linked** from one of the indexes and to give them the same relevance as all other pages.
