## Export existing pages and products from one shop and import these products into another shop

Jobelle C. - 2021-09-07 - Pagina's en producten

**CHECKPOINT:** The shop language you are exporting products from MUST match the language of the shop you are importing into.

**For example:**

*If your source shop has **en-uk** language, then the shop you are importing the products into must have en-uk as well in the translation languages.*

*The shop you are importing to MUST at least use **en-uk** as primary shop language. Or the shop you are importing to must have the **en-uk** added in the Languages -> "Translation languages"*

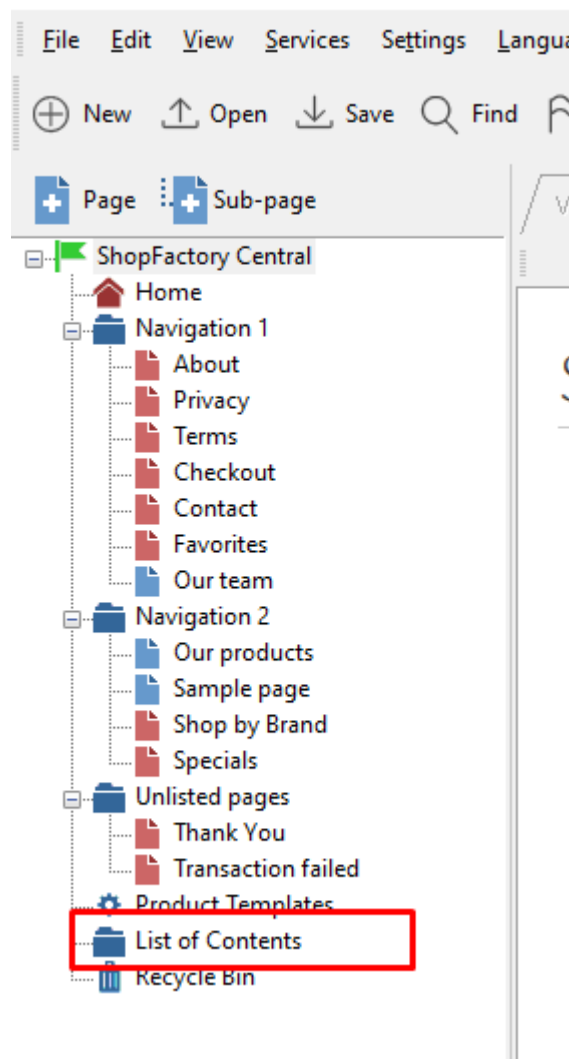

*If **en-uk** is a secondary language then the products will be imported and be visible in the imported language.*

- If the imported language is not the primary language, then products will be visible in the imported language but not visible in the primary language...*
- If the imported language is the primary language, products will be visible in the primary language*

**A. How to export products within ShopFactory:**

*Please follow the steps below on how to export products as an xml file:*

1. Open the shop where you want to export products
2. On the left tree, select **LIST OF CONTENTS**

### 3. Select Products you want to export

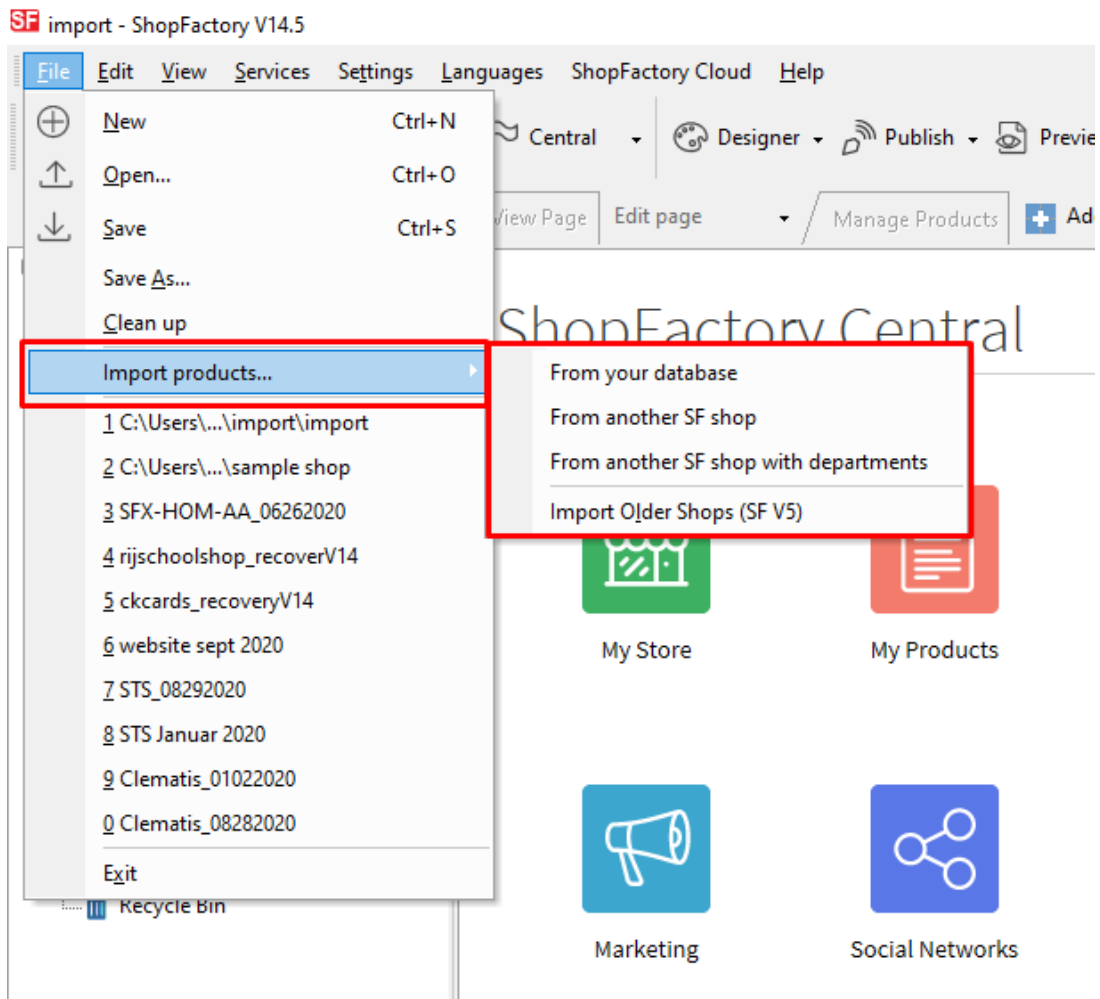

### 4. Right click on the selected products -> click **"EXPORT ALL SELECTED PRODUCTS"**

5. Save it as an XML file

## B. How to import products within ShopFactory:

1. Run ShopFactory application
2. Select the shop you want to import the products into
3. Click FILE menu -> select **IMPORT PRODUCTS...** (or if you want the department names as well, select **"Import another SF shop with departments..."**)

4. **Import products From another SF shop**, select the export XML file

5. Click -> OPEN

The products in XML file will now be imported in your shop.
